

\$500

energy saving guarantee

The most powerful energy advisor available

Emberpulse® is an intelligent in-home system, compatible with all solar systems. Emberpulse® monitors and advises you how to reduce your energy costs and earn more from your solar.

It's guaranteed to find you at least \$500 in energy savings within 3 years^Δ.

Never get ripped off by electricity companies again

Our energy bills have increased over 113% in 10 years and are among the most expensive in the world. Today you could be paying up to \$1,500 more than you should.

Emberpulse® stops you getting ripped off by comparing your actual energy usage against the hundreds of energy plans available. This type of detailed bill analysis has not been possible until now.

Emberpulse® is a world first product that always ensures you're on the best energy plan. It's the product that the energy retailers wished didn't exist.

Guaranteed solar outage protection

Emberpulse® also provides solar monitoring. Did you know that solar system outages usually go undiagnosed for up to 4 months, costing you over \$600.

Emberpulse® guarantees to protect your solar investment by notifying you of an outage – if we don't, we'll pay you for your lost solar revenue. This is an offer not available anywhere else.

So many functions in one world first system

Designed and developed in Australia and patented internationally, the Emberpulse® system is your energy advisor, providing you independent data driven recommendations for your energy needs.

Cheapest energy plan

Emberpulse® analytics use YOUR live energy data to assess against 300+ electricity plans. This unique analysis ensures you are always on the cheapest energy plan†.

(Average saving \$199 per year).

\$500 saving guarantee

Emberpulse® guarantees to find you \$500 in energy savings over 3 years△.

24/7 energy monitoring

Live monitoring of your solar generation and home energy use.

Comprehensive daily, weekly, monthly or quarterly reports that detail your home's energy use.

Guaranteed outage alerts

Our Solar Sentinel protection package: we will notify you of an outage or we'll pay for your lost solar revenue#.

(Be informed of an outage before it costs you over \$600).

Real time notifications

Stop guessing when to use your solar power. Emberpulse's coloured light will advise when it's financially best to use/export your solar power based on how you use energy, saving you hundreds each year.

Battery assessment

Don't be duped by expensive promises. Determining your home's battery suitability isn't as simple as glancing at your electricity bill. Rapid developments in battery technology make it difficult to stay current with this emerging industry.

Remote home control

Remotely control your home's air conditioning, lights and more via the easy to use Emberpulse® app^.

Home automation

Save more money by having Emberpulse® automate your major energy loads – e.g. hot water and pool pumps, by running them when the cost of energy is cheapest.

(Average saving \$215 per year).

Let Emberpulse® properly calculate the battery suitability of your home through assessing your unique electricity profile; precisely pinpointing not only when to invest in battery storage, but also defining the best battery storage solution for your needs.

We continually assess developments in the battery market and ensure that only the best solution for your needs is recommended.

Easy installation

A licensed electrician will install and configure a special meter inside your home's electrical fuse box. This communicates wirelessly with Emberpulse®.

The Emberpulse® unit is placed inside your home, so you can view its pulsing real time energy notifications.

The most powerful energy advisor

- ✓ \$500 guaranteed energy savings
- ✓ Always be on the best electricity plan
- ✓ Guaranteed solar outage alerts and solar income protection
- ✓ Monitor your energy in real time
- ✓ Remotely control your home's air conditioning, lights and other devices

Use the Emberpulse® app to remotely monitor and control your home appliances, such as your air conditioning, lights and more.

Frequently asked questions

What are the installation requirements?

Emberpulse® can be installed in any home that has a permanent Wi-Fi internet connection.

How does Emberpulse® connect to my home?

A licensed electrician will connect Emberpulse® to a sub-meter in your fuse box in less than 30 minutes.

Does my home need solar power to use the Emberpulse® system?

No. Emberpulse® can be used to find you the cheapest energy plan, monitor your energy consumption and control your home. Soon Emberpulse® will also assess the value of solar for your home to assist in making the right solar system choice for your needs.

How do I access the Emberpulse® system?

Access the Emberpulse® system via our Android/iOS app or via the website emberpulse.com.au

How often is my energy data updated?

You can view your solar generation and energy consumption in real time 24/7. You can also setup notifications to track your solar generation and energy costs during each billing period.

How often do I receive energy saving recommendations?

Emberpulse® continually monitors your energy profile to find new ways to reduce your energy costs. This includes better energy plans, battery storage options and more. You will be notified of savings as soon as they are available.

Additional comfort and control for your home

Emberpulse's smart home capability allows you to control your air conditioning, lights and other smart devices – all from one app. Smart devices available at emberpulse.com

Emberair® allows you to monitor and control your home's air conditioning from your couch, your workplace or even while on holiday.

Emberiq® is a smart device that plugs directly into any home electrical socket. Any appliance plugged into Emberiq® can be monitored and controlled remotely.

Emberlux® provides a physical switch for your controllable lights and appliances. Simply press the Emberlux® switch to easily turn lights/devices on and off.
